This is only phase one of the IFCN's unreliable news index.

The next phase of the project will be to **automatically remove inactive sites**, add sites by following URL redirects (which often lead to new fake news schemes) and **harvest related domains**.

For example, notorious conspiracy site YourNewsWire.com now redirects to NewsPunch.com to attempt to avoid detection by fact-checkers and the platforms. The SpyOnWeb research tool detects the relationship between misinformation sites, along with other domains connected by IP address or Google Analytics and AdSense ID (see Bellingcat's site research guide for more on these tools).
